TECHNICAL SKILLS

- **Languages:** Java, Python
 - **Backend :** Spring Boot, Hibernate, REST APIs, Spring Security, Microservices.
 - **Messaging & Caching:** Kafka, RabbitMQ, Redis
 - **Frontend:** React.js, Tailwind CSS, HTML, Responsive UI, API Integration.
 - **Database:** MySQL
 - **DevOps:** Docker, Git/GitHub, CI/CD, Nginx.
 - **Security:** JWT, RBAC, BCrypt
-

EXPERIENCE

Java Developer Intern - Uptrick Services Pvt.Ltd

Jan 2026 - Apr 2026

- Designed and built SmartOrder, an event-driven microservices backend with three core services — Inventory, Payment, and Notification.
 - Used Kafka to connect the Payment service to downstream services, enabling asynchronous event-driven communication for order/payment events.
 - Used RabbitMQ for messaging between Inventory and Notification services.
 - Debugged and resolved integration issues connecting Kafka across services
-

PROJECTS

DeployHub - Automated Deployment Platform

Oct 2025 - Dec 2025

- Built a deployment platform inspired by Vercel that clones GitHub repositories, automatically builds React applications, creates Docker images, and runs containerized deployments.
- Designed a strategy based build pipeline to automatically detect React projects and execute the correct build commands (npm install and npm run build) without hardcoded project logic.
- Implemented a project root resolver that recursively scans repositories to locate the actual application directory, enabling support for nested project structures instead of assuming the project exists at the repository root.
- Developed secure REST APIs with JWT-based authentication and role-based access control to manage user projects and deployment requests.
- Created a reusable command execution service using Java ProcessBuilder to automate Git, Node.js, and Docker commands while capturing execution status and logs.

Tech: Java 24, Spring Boot, Spring Security, JWT, Docker, Nginx, Git, ProcessBuilder

Real-Time Phishing Detection System

Jan 2026 - Mar 2026

- Built a multi-agent ML pipeline combining URL analysis, domain intelligence, and NLP-based content inspection to detect phishing threats in real time via a browser extension.
- Engineered a 45-feature URL Agent using an ensemble of Random Forest, Extra Trees, and Gradient Boosting models trained on 188k+ URLs, achieving ~96% detection accuracy.
- Designed a Fusion Agent to aggregate confidence scores from 3+ specialized sub-agents into a final threat score, improving precision over single-model approaches.
- Building a FastAPI inference backend to serve real-time predictions with sub-100ms target latency for browser extension requests.

Tech: Python, scikit-learn, FastAPI, React, Browser Extension API

EDUCATION

June 2022– June 2026

B.Tech in Computer Science and Engineering: 8.88 CGPA

Ramrao Adik Institute of Technology
